private cloud accelerator

deploy Private Cloud in non-productive environment for better understanding

what is for?

Private Cloud Accelerator rapidly delivers a functioning VMware vCloud computing environment, suitable for deploying applications in pre-production environment.

This rapid validation of a fully functional VMware vCloud-based infrastructure running your applications, lets you experience the tangible benefits of a VMware vCloud solution and lays the foundation for broad scale production deployment of cloud computing services in your organization.

This service is **designed for enterprises who have adopted vSphere as their virtualization platform**, have virtualized key applications and are **interested in Cloud computing and service based delivery** and consumption models for their organizations.

(general description)

what we do?

Design & Deploy (non productive environment)

Phase1: Planning and Pre-engagement Preparation

Phase2: Engagement Kickoff

Phase3: vCloud Jumpstart

Phase4: Discovery Workshop

(actions/ phases/ deliverables)

adopt a cloud

temperfield

Phase5: Validation Plan (test cases to be validated in pre-production environment)

Phase6: Architecture Customization and Environment Build-out

Phase7: VMware vCloud Environment Validation

Phase8: Project Wrap-up

what we use?

vmware

vRealize Automation Suite

(technologies)

what we provide?

Private Cloud Accelerator service provide Architecture Design Documents for non-productive environment.

(benefits)

• **Intelligent Operations**: improved efficiency, performance and availability, by addressing health, performance and capacity management of IT services across heterogeneous and hybrid cloud environments.

• **IT Automating IT**: reduced time to respond to requests for IT resources and to improve the ongoing management of provisioned resources, by automating the delivery and application components across multi-cloud environments.

• **DevOps-Ready IT**: building a complete application stack; support developer choice by providing both API and GUI access to resources and provision resources across multi-cloud environments. Extend the solution scope by addressing continuous delivery to further speed up application development.
